Dashboard Objectives

The Executive-level (CEO) dashboard is used for monitoring the overall condition of Samba commerce, which focuses primarily on transactions, and can provide a greater understanding of business performance through any key metrics.

WHO IS THE USER(S) OF THE DASHBOARD?

The Chief Executive Officer(CEO) is the primary user of this dashboard; however, Other Executives levels can utilize the dashboard for occasional purposes as needed.

WHY DOES USER(S) NEED THE DASHBOARD?

This dashboard is required for monitoring the general condition of the Samba commerce business and obtaining insights from the dashboard

WHAT IS ONE USE CASE EXAMPLE?

The CEO can use the dashboard to check the status of the company on a regular basis and call a meeting if he notices anything out of the ordinary so that the team can act quickly to explain the situation and find a solution if a problem exists.

Looker Studio Dashboard - Findings/Insights #1

- The number of sellers increased by 25.6% at the end of the final quarter of 2021 to 1.194 sellers compared to third quarter.
- Similarly, when compared to the previous quarter period, the number of users / customers grew dramatically to 16,663 (41.8%).

- Following the addition of total users, the number of orders increased by 41.1%, but the number of orders per user dropped by 0.5%.
- The general increase was in the amount of items purchased per order, which rose by 0.3%.

Looker Studio Dashboard - Findings/Insights #2

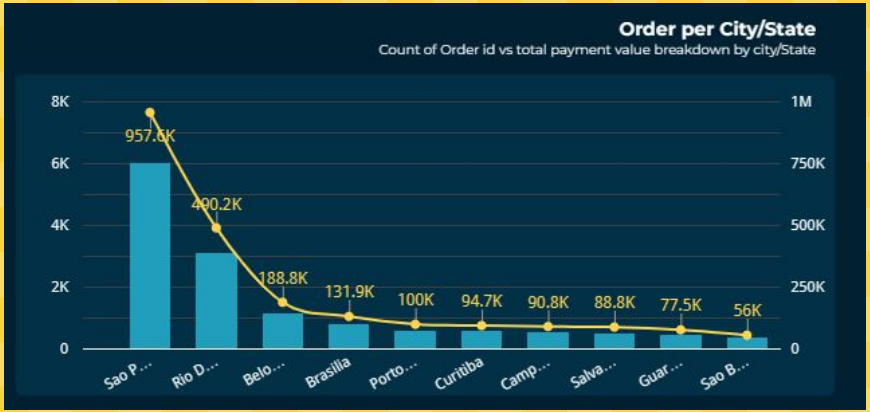

The trend of the 10 product categories that have the highest number of purchases has remained the same since 2021; this trend can also be seen in the period beginning in January 2022; this demonstrates that these items are genuine favorites with quality that is in accordance with the standards of buyers.

Looker Studio Dashboard - Findings/Insights #3

Aracaju, Campinas, Rio, and Sao Paulo are the citiies in 2021 that have the highest order rates per user. This also is clearly shown in the order per city graphic, which also reveals that Sao Paulo, Rio, and Campinas have the highest total orders and total values. Throughout the year 2021, the five cities that have the highest order rates per user are Aracaju, Campinas, Rio, and Sao Paulo.

So it would make sense that those cities is worthy of being a venue for events / programs so that the number of users and purchases increases

Looker Studio Dashboard - Findings/Insights #3

Data pada jan 2022 untuk jumlah order berdasarkan kelompok nilai barang masih sejalan dengan sepanjang tahun 2021 dimana mayoritas total pembayaran ada pada range BRL R$ 51 - R$ 200

Customer Characteristic

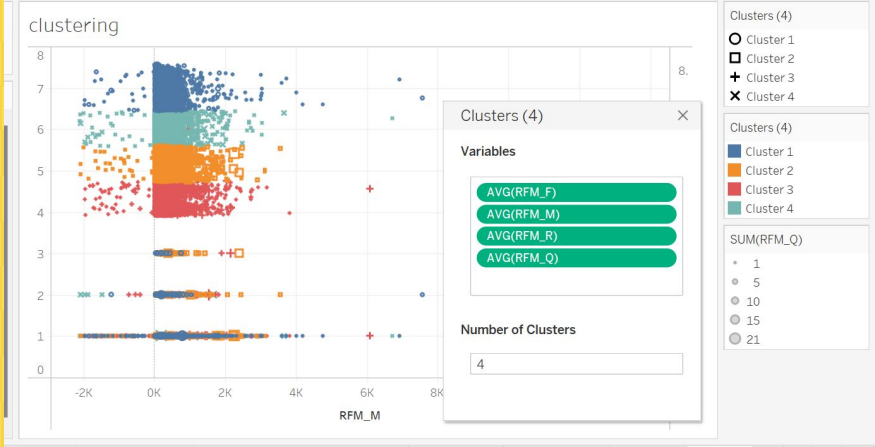

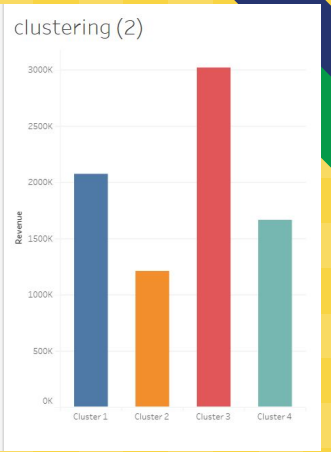

In Brazil, there are 48,022 Samba commerce customers, with the majority residing in the SP region (39.66%) and the least in RR (0.04%). The majority of customers use credit cards, and the most popular promotion is the use of bolito tickets, with SP, RJ, and MG being the three customer locations (states) that use bolito tickets the most..

Customer Clustering

Clusters	Number of Items	Centers Avg. RFM_F	Avg. RFM_M	Avg. RFM_R	Avg. RFM_Q
Cluster 1	7085	1.0202	166.85	743.45	1.1585
Cluster 2	11849	1.034	171.8	555.34	1.1917
Cluster 3	18790	1.0335	158.0	467.09	1.1808
Cluster 4	10297	1.0285	157.03	646.26	1.1594
Not Clustered	0				

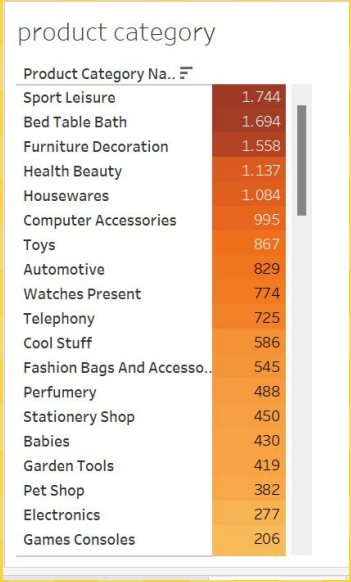

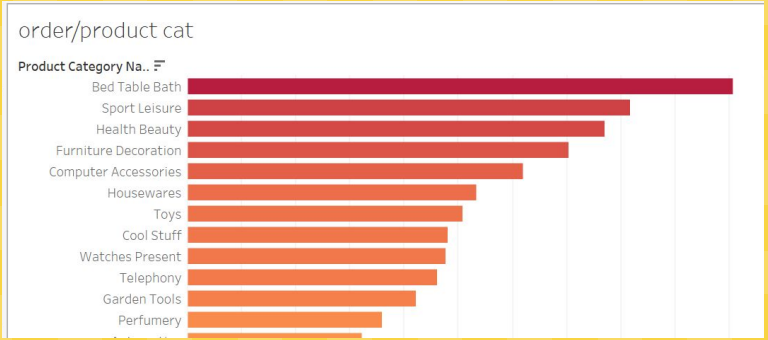

Clustering is performed using the k-means method with the Recency, Frequency, Monetary, and Quantity variables in tableu. We attempt to divide it into four categories.
Based on this classification, the most vulnerable group is cluster 1, which has the highest R value (uda lama ga transaction), the fewest transactions, and the smallest number of products, despite having a respectable monetary value.

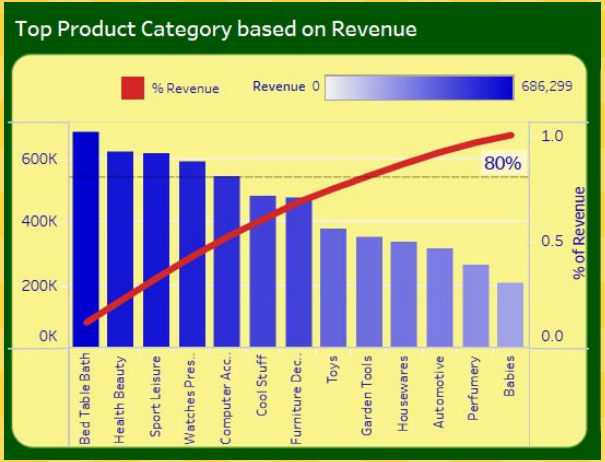

Product characteristic

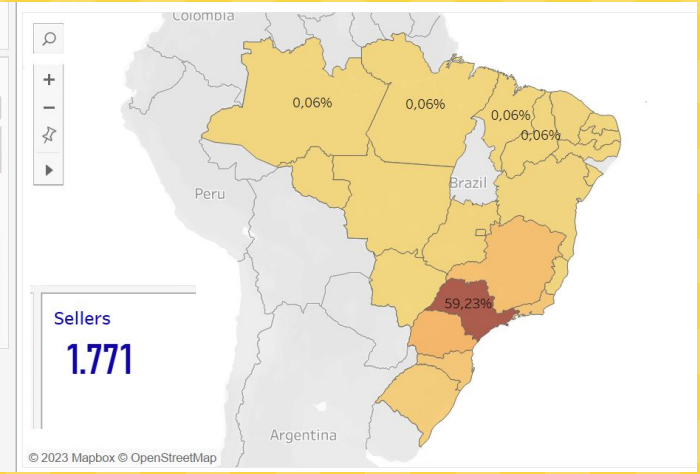

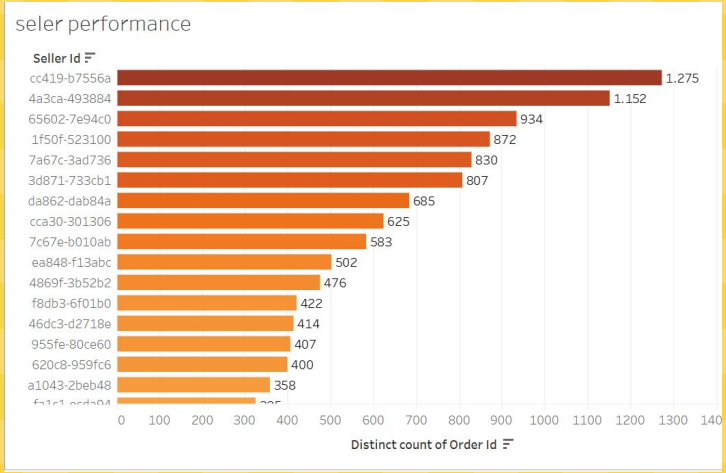

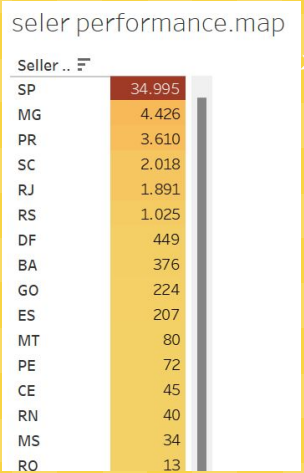

Samba commerce has 17,641 types of products divided into 72 types of categories, of which the most are in the sports leisure and bed table bath categories. Based on the calculation of transactions made, 3 products that are widely purchased are bed table bath, leisure products and health beauty.

By using pareto using the revenue obtained, we can see that there are 9 priority products that generate the most revenue for the company. In addition to the 3 products that have been mentioned, the others are Waches, coolstuff, toys, computer accessories and furniture decoration

Sellers characteristic

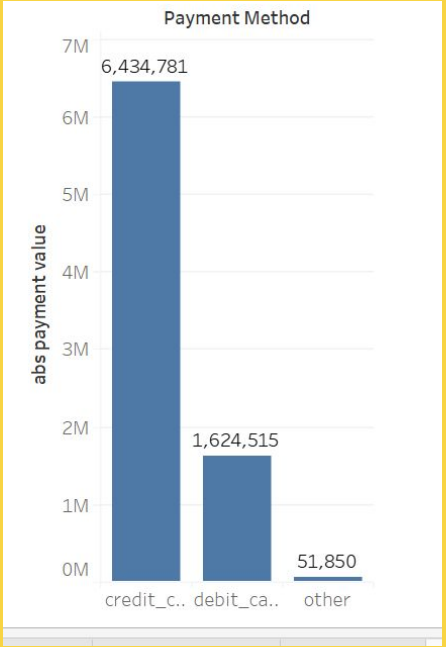

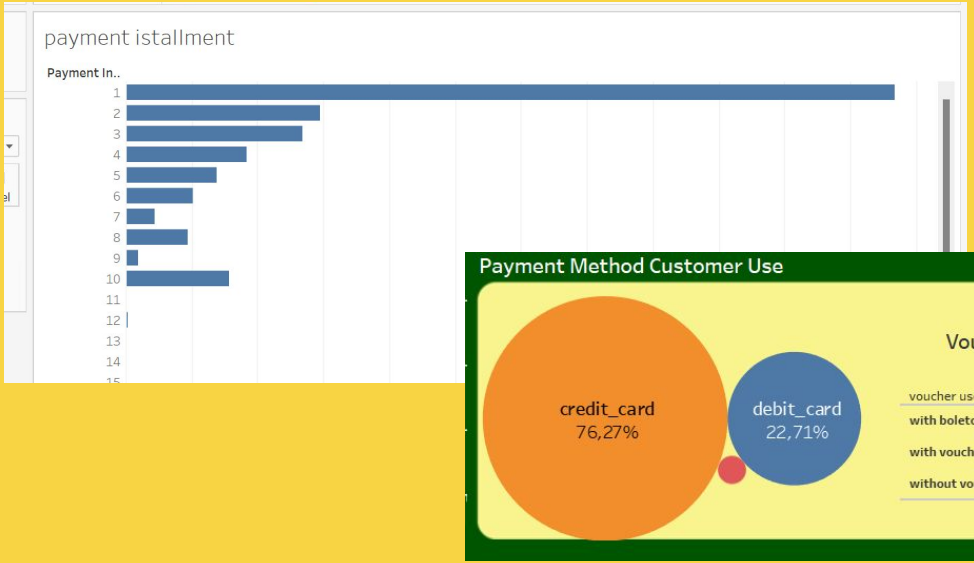

There are 1,771 sellers listed on Samba Commerce, with SP representing 59.23% of all seller. The 10 top-performing sellers were able to transfer 500 transactions to 1,275 transactions between January 2021 and January 2022. And sp is the province with the most transactions, with MG coming in second place.

Payment Istallment

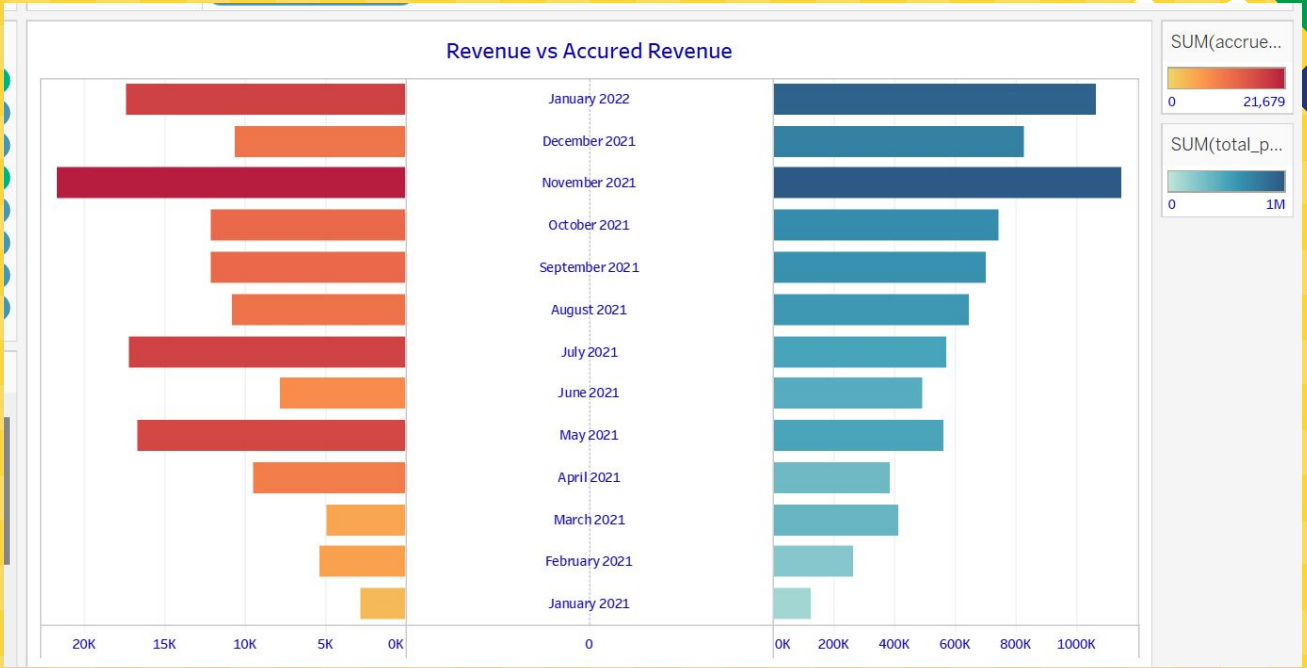

As stated previously, credit cards are used by 76.27 percent of customers. The value of transactions conducted with credit is greater than $6,000,000. The majority of consumers install between 1 and 24 times (2 years), with the majority installing fewer than 3 times. (months)

Revenue

Revenue	Accrued revenue
R$ 7.962K	R$ 149K

In the total payment value column, I found that there are positive and negative data. The majority of negative data is credit card transaction data which I then assume as receivables, therefore I divide the data into positive and negative data groups using the IF - THEN Function. The positive is the revenue that has come in and the negative is the receivables
